

# Application and Network Analysis

The smart tool for Analyzing Network Delay

Irritated, confuse, unhappy with the network delay problem which effects the value of the services, consumes time, and difficult to maintain.

Let ANA module help you by analyzing network delay problems for better time management and leverage your service and expenses.

Making it simpler for you as you can also Pin-point your network delay problems around the globe with ANA-Application and Network Analytic, one of module of NetkaView Network Manager which can pin-point the problem weather it came from application, system or network via a displayed color-coded system according to severity level, therefore recognizing the importance of an issue more quickly and analyze the problems in real time.

The Data from the network latency problems are also recorded and stored for future reference, which can help the administrators to investigate reports of delays that occurred at a previous time and implement preventative measures to ensure the issues do not resurface.

The ANA Module, the solution is based upon the Cisco Application Visibility and control (AVC) Solution, new technology from Cisco.
